

Line XVR 8 H.265 Description

Line XVR 8 H.265 - 8-channel multiformat video recorder. The key advantage of this format is the ability to work simultaneously with several cameras of these types:

- CVI, CVBS, HD-TVI, AHD (with resolution up to 8 megapixels);
- IP cameras of all known brands (over 5,289 models with unlimited resolution).

A license for the Line software is included in the package with the video recorder. Local interface allows using all features of the Line video surveillance system, including 21 intelligent modules, without installing the program on a PC. You can connect two independent monitors to the system using VGA or HDMI, as well as a USB mouse/keyboard.

The key feature is the ability to automatically set up each channel individually. You no longer need to create templates for various types of cameras connected to the surveillance system before you start work. The video recorder will find the analog type of signal and integrate the camera into the system on its own.

The design of the Line XVR H.265 recorder allows installation of two 3.5-inch hard drives (a total of up to 24 TB). This allows expanding the current system features to analyze record archives, localize surveillance, and use other options. The space for hard drives is inside the device body.

For remote video surveillance you can use Android and iOS mobile phones and tablets, browsers that support Flash, as well as office or home PCs with Windows x86-x64: XP, Vista, 7, 8, 10, or Server 2003-2019 OS.
